

## ENERGY EFFICIENCY MANAGEMENT POLICY

ESP-GG-02 / VERSION: 2 / DATE: 2025-05-14

**Marbelize S.A.**, a company dedicated to the processing and export of frozen pre-cooked tuna products and sterilized canned tuna in various presentations, aware of the importance of energy efficiency within the organization, is committed to promoting, establishing, maintaining, and continuously improving the Energy Management System through this internal energy policy, focused on optimizing energy consumption and enhancing energy performance.

The organization recognizes the Energy Management System as a mechanism to optimize processes, reduce energy consumption, minimize environmental impact, and improve competitiveness.

Top management will provide the necessary resources and foster a culture of energy efficiency throughout the organization. It is committed to the continuous improvement of energy performance through the implementation and maintenance of the Energy Management System in accordance with ISO 50001. Additionally, the company commits to the following:

- Efficiently use the energy consumed by the different activities within the production process, to preserve natural resources, reduce costs, and enhance corporate image.
- Establish action plans related to significant energy uses to effectively manage energy performance.
- Define objectives and targets that contribute to the continuous improvement of energy performance.
- Periodically review energy performance and the status of the management system to implement continuous improvements.
- Ensure the availability of information for evaluating the management system.
- Manage the resources provided by top management to fulfill energy objectives, targets, and performance.
- Establish a continuous improvement mechanism for the management system through its effective implementation, optimizing energy consumption, modifying production processes where possible to achieve significant savings, managing sustainable purchases, sustainable designs, and efficient energy services.
- Adapt to legal changes and other requirements considered within the management system.
- Communicate the results of energy performance and the degree of achievement of energy objectives and targets.
- Promote the capabilities of personnel and the responsibilities of the Energy Management System team members to ensure the proper execution of their functions within the system.
